Description :

Prsentation de l'diteurThis book is a unique teaching tool that takes math lovers on a journey designed to motivate kids (and kids at heart) to learn the fun of factoring and prime numbers. This volume visually explores the concepts of factoring and the role of prime and composite numbers. The playful and colorful monsters are designed to give children (and even older audiences) an intuitive understanding of the building blocks of numbers and the basics of multiplication. The introduction and appendices can also help adult readers answer questions about factoring from their young audience. The artwork is crisp and creative and the colors are bright and engaging, making this volume a welcome deviation from standard math texts. Any person, regardless of age, can profit from reading this book. Readers will find themselves returning to its pages for a very long time, continually learning from and getting to know the monsters as their knowledge expands. You Can Count on Monsters is a magnificent addition for any math education program and is enthusiastically recommended to every teacher, parent and grandparent, student, child, or other individual interested in exploring the visually fascinating world of the numbers 1 through 100. Any person, regardless of age, can profit from reading this book. Readers will find themselves returning to its pages for a very long time, continually learning from and getting to know the monsters as their knowledge expands. *You Can Count on Monsters* is a magnificent addition for any math education program and is enthusiastically recommended to every teacher, parent and grandparent, student, child, or other individual interested in exploring the visually fascinating world of the numbers 1 through 100.

Biographie de l'auteur Richard Schwartz grew up in Los Angeles. He wore only blue clothes between the ages of 7 and 11. He spent his youth obsessively playing tennis until video games distracted him. He majored in math at UCLA, got a Ph.D in math from Princeton and is currently a professor at Brown University, with research interests in geometry, topology, and dynamics. He likes to do mathematical experiments on the computer and then find proofs for the results he discovers. Rich was an Invited Speaker at the 2002 International Congress of Mathematicians, a Guggenheim Fellow in 2003, and a Clay Research Scholar in 2009. He is the author of a number of books, including *Spherical CR Geometry and Dehn Surgery*, *Outer Billiards on Kites*, *Man Versus Dog*, and *The Extra Toaster*, among others. He lives with his wife and two daughters in Barrington, Rhode Island. In his spare time, he listens to music, writes comic books, thinks about future technologies, cycles on the bike path near his house, walks on the beach, or plays with his children.
